2nd March 2017

Dear Parent / Carer,

We have been informed that a small number of children who attend our school have been diagnosed with suspected / confirmed scarlet fever.

Scarlet fever is usually a mild illness, it should be treated with antibiotics to minimise the risk of complications and reduce the spread to others.

Although we don't want to cause panic, it is important to know what to look out for should your child feel poorly.

The symptoms of scarlet fever include a sore throat, headache, fever, nausea and vomiting. This is followed by a fine red rash which typically first appears on the chest and stomach, rapidly spreading to other parts of the body. On more darkly-pigmented skin, the scarlet rash may be harder to spot, but it should feel like 'sandpaper'. The face can be flushed red but pale around the mouth.

- If you think you, or your child, have scarlet fever:
- See your GP or contact NHS 111 as soon as possible.
- Make sure that you/your child takes the full course of any antibiotics prescribed by the doctor.
- Stay at home, away from school for at least 24 hours after starting the antibiotic treatment, to avoid spreading the infection.

If your child has an underlying condition which affects their immune system, you should contact your GP or hospital doctor to discuss whether any additional measures are needed.

You can find more information on the reverse of this letter.

Yours sincerely

Mrs Bulsara
